

# Champaign Screenings

Last Updated Monday, 09 October 2006

Champaign County  
Developmental Screenings

Infants, Toddlers and Children ages Birth to Five

-

Screenings look at major milestones in a normal child's development. A screening will indicate a child's overall development is within normal expectations or pinpoint areas of concern indicating need for a further evaluation.

-

Evaluations are completed by individual professionals such as physical therapists, speech language therapists, developmental therapists, occupational therapist, and hearing and vision specialists. Evaluators look much more closely at the child's development in specific area and take 1-2 hours per area of evaluation.

Date	Location	Phone	Contact Person
